

Can multimode optical fiber be packaged in a plastic box

Overview

Some common packaging materials for optical fiber are plastic spools, reels, or drums that can hold the fiber coils securely and prevent them from tangling or kinking. ning Optical Fiber are packed in ISTA (International Safe Transit Association) tested corrugated boxes or plastic shipping totes. Either package can accommodate 8 single-wide or 4 double-wide spools. The first step to ensure optical fiber is properly packaged and shipped is to choose the right packaging material. Today, we will discuss the differences between them to help you better understand their characteristics and application scenarios. COB packaging integrates components directly onto a PCB, enabling miniaturization and cost efficiency. BOX.
