

Did your old router have fiber optic internet

Overview

Yes, you can often use your existing router with fiber optic internet, but there are crucial considerations. Understanding compatibility, potential limitations, and when an upgrade is necessary will ensure you get the most out of your high-speed connection. This guide will break down everything you. Fiber optic internet represents a significant leap in internet technology, utilizing thin strands of glass or plastic to transmit data as pulses of light. In other words, you'll need a newer router that can handle high speeds with Wi-Fi 7 to go along with. In the era of high-speed internet, a common question has been popping up: is your old router capable of handling the blazing speeds of your new fiber connection?

As internet service providers like AT&T, Centurylink, and Orange roll out fiber plans with speeds of 500Mbps, 1Gbps, or even symmetric. Most fiber ISPs, including Mercury, provide an ONT that connects directly to your router via an Ethernet cable.
