

Does China Unicom fiber optic internet require a professional router

Overview

The provider will supply a router, though you may use your own compatible device if you prefer. Keep a record of your account login details and the provider's customer support hotline number. Don't wait any longer and get started! If you've purchased a ZTE router from China Unicom and need to configure it to connect to the Internet, don't. They may not provide a router; if so, consider buying one that can support 1000 Mbps of processing power to make the most efficient use of your wifi services. DO NOT forget the telephone number. A technician will come to your home to fit the modem and router, connect the fibre line to the relevant socket, and carry out a line test. In major cities, installation appointments can usually be booked within a few days to a week of signing the contract. Go live and configure your equipment. Unfortunately the Modem is hardware locked to the isp end, meaning u won't be able to replace it easily afaik. China unicom's latest wifi 6 router, featuring cpe base station direct connection technology, delivers true high-speed broadband experience without the need for a wired network connection Suitable for renters, older residential communities, and mobile office environments.
