

Empty Box 12-Core Fiber Optic Distribution Frame

Overview

Featuring a 12-core empty tray without pigtail flange in a sleek off-white enclosure, this distribution frame allows flexible fiber termination and organized cable management, perfect for customized fiber optic deployments. It is mainly used as an interface between an optical transmission network, an optical. Modern telecommunications depend on 12 cores fiber optic distribution frame as basic building blocks for fast data transfer over great distances. These devices and systems use light to transport data and provide better dependability and bandwidth than conventional copper connections. This sturdy construction ensures that it is both waterproof and dustproof, making it suitable for a wide range of. DIGISOL Optical Distribution Frame provides cable interconnections between communication facilities that can integrate fiber splicing, fiber termination, fiber optic adapters and connectors in a single unit for High-Density capacity designed for 24 core to 144 core. Built to fit standard 19-inch telecom or network racks, this empty box allows full customization with your choice.
