

FC Single-mode Fiber Interface

Overview

The FC connector is a fiber-optic connector with a threaded body, which was designed for use in high-vibration environments. FC connectors are used in datacom, telecommunications, measurement. Fiber optic connectors in SFP modules are the physical interfaces that connect the transceiver to fiber patch cables, enabling optical signal transmission between network devices. Multi-Fiber In the dynamic world of optical communication, one component that truly stands out is the fiber optic connector. Developed by NTT (Nippon Telegraph and Telephone) in the late 1970s as the "Field-Assembly Connector," FC Connectors were the first to feature a. Many devices used in data transmission, sensor technology, medical technology, control tasks, and industrial applications are equipped with FC-type connectors – either with a physical contact (PC) or angled physical contact (APC) polish – for the interconnection of optical fiber components or. Single-mode fiber cable with Gaussian intensity distribution and low-stress fiber connectors.
