

Fiber Pigtail and Optical Cable Distribution Frame

Overview

Optical distribution frame (ODF) is a frame used to provide space for fiber pigtails and fiber cable connection between fiber optic equipment, which can integrate fiber splice tray, fiber optic adapters & connectors to fix on a fiber optic cabinet. Fiber pigtails are simple in appearance, yet essential in function. It brings together fiber splicing, patching, and cable routing in a single structure, while shielding sensitive connectors and splices from mechanical stress or. ODF is used in the terminal access link of FTTH system. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. Fiber Distribution Frames They easily terminate fiber optic cables and provide channels for cross-connecting individual fibers. The splice tray splices the fiber to the.
