

Fireproof sealing and flame-retardant bags for cable trays

Overview

They are used as permanent or temporary fire protection in openings up to 600mm x 600mm and around penetrations such as cable trays and electric cables. Inside a non-combustible fibreglass casing, a high-density concentrate of intumescent components, inert thermal insulators and products with gradual release of. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0.7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. The KBS ® fire protection portfolio includes a wide range of fire protection products of the highest quality that reliably prevent the spread of fire in an emergency and thus permanently meet building code requirements. Available in up to 5 different sizes, depending on the respective approval. KBS ® Sealbags are preferably used in such penetration seals where cable layout changes are frequently. Firebreak Bags comprise a range of different sized coated glass cloth bags filled with a blend of durable intumescent and inert fillers. Easy installation with optimised dimensions for more efficient use and main types of openings.
