

## How much does a 5mm optical cable weigh

### Overview

Result: The weight will be approximately 70. Input 50 and select meters for the length. Click "Calculate. Calculate cable weight from length and weight per meter, or estimate total weight by cable size, material, core count, and insulation. Solve for the missing value or estimate weight from conductor size. Leave the one you want to solve for blank. Let's assume a cable with a cross-sectional area of  $50\text{mm}^2$  and a material density of  $8\text{ kg/m}^3$ . Using the calculator:  $W = 50\text{ mm}^2 \times 8\text{ kg/m}^3 = 400\text{ kg/m}$ . This implies that for every meter of this particular. An electric cable weight table is a specification table that clearly states the weight of electrical cables per unit length, typically calculated in  $\text{kg/km}$  or  $\text{kg/m}$ , helping users quickly determine cable weight according to specific cross-sections and lengths.
