

How much does an imported OTDR optical time domain reflectometer cost

Overview

Prices for new TDR and OTDR systems typically range from \$5,000 to \$30,000, depending on the brand, features, and specific application of the unit. High-end models with advanced measurement capabilities and higher accuracy can reach the upper end of this price range. Check each product page for other buying options. An optical time domain reflectometer, or OTDR, is a device that tests the integrity of a fiber optic cable, as well as the loss and reflectance of fiber splices, by measuring its various characteristics using Rayleigh scattering and Fresnel reflection effects. By launching a series of light pulses into the fiber and measuring the backscattered and reflected light, OTDRs can determine key parameters such as fiber. Current estimates place the market size in the billions of dollars, with projections indicating a compound annual growth rate (CAGR) of several percent over the next five years. This growth is fueled by the deployment of 5G networks, increasing demand for high-speed broadband (FTTH/FTTx), cloud. We offer a range of carefully selected optical time domain reflectometers (OTDR) from leading manufacturers. Our independent experts will work with you to understand your needs and explore all the options to find the ideal test and measurement equipment solution.
