

How to install cable trays on pipe racks

AI Overview

Cable trays on pipe racks should be installed with proper spacing, corrosion and thermal protection, and coordinated with electrical and instrumentation systems to ensure safety and maintainability. Placement and Spacing When installing cable trays on pipe racks, position them on one side of the rack to avoid interference with pipelines and equipment. Avoid placing trays directly below pipelines carrying corrosive liquids or above pipelines carrying corrosive gases. If unavoidable, maintain a minimum distance of 500 mm and use a corrosion-resistant partition for protection. For thermal pipelines, maintain 500 mm clearance if insulated and 1000 mm if uninsulated, and avoid placing trays directly above thermal lines. At intersections, use corrosion-resistant cover plates or thermal insulation boards with a length of at least the pipeline diameter plus 2000 mm. Rack Tiering and Future Growth Cable trays are generally installed on the top tier of the pipe rack, along with instrument cable ducts, to facilitate access and maintenance. Ensure the pipe rack design allows for 20–25% future growth in width and capacity, depending on client requirements. Anchors should be provided at anchor bays or distributed over consecutive bays to support the trays and associated pipelines. Material Handling and Preparation All cable tray materials should be inspected upon delivery for compliance with approved submittals and for any damage. Store trays horizontally on flat surfaces with timber supports at 1-meter intervals, protected from moisture and sunlight. Verify that all tools and equipment meet contract requirements before installation. Installation Practices Follow approved shop drawings for tray layout, length, and routing. Maintain horizontal and vertical runs only, avoiding unnecessary bends. Ensure adequate clearance for cable pulling and future maintenance. Use appropriate supports and hangers designed for the tray system, following standards such as BS EN 61537 for cable trays and ladders. Avoid using trays as walkways or for supporting personnel...
