

Huawei 97 Series Core Switches

Overview

Based on Huawei Versatile Routing Platform (VRP), the S9700 switches provide high-performance L2/L3 switching and integrate a range of services, such as MPLS VPN, hardware IPv6, desktop cloud, video conferencing, and wireless access. This document describes the positioning, characteristics, architecture, link features, service features, application scenarios, operation and maintenance functions, and technical specifications of the switch. Huawei switches already help customers achieve success in industries such as finance, Internet, retail, education. This document is intended for: Data configuration engineers Commissioning engineers Network monitoring engineers System maintenance engineers Symbol Conventions The symbols that may be found in this document are defined as follows. It covers essential concepts, step-by-step configuration procedures, and practical examples for various WAN access technologies, including. The S9700 series terabit routing switches (S9700 for short) are high-end switches designed for next-generation campus networks and data centers to implement service aggregation.
