

Large Pair Fiber Optic Distribution Frame

Overview

Wall-mounting ODF-LARGes are used to terminate and distribute optical fiber cables; they are convenient equipment to organize and connect fiber optic links. The door and panel are hinged with locks. ODF is two-sectional, which enables separation of the cables and switches. An Optical Distribution Frame (ODF) is the central hub for fiber splicing, termination, patching, and cable protection in modern optical networks. It brings together fiber splicing, patching, and cable routing in a single structure, while shielding sensitive connectors and splices from mechanical stress or. Achieve successful cable management, handle high amounts of fiber cable and add density to fiber frames with the new DCX Optical Distribution Frame (ODF) System which features innovations like flippable cassettes, modular frame design and multiple configuration options. Units with pre-terminated cables offer.
