

Operation of Push-Pull Distribution Box

Overview

The M12 push-pull distributor simplifies applications in machine construction, automation and intralogistics by bundling the wiring of sensors and actuators in an IP67 environment. It combines signals and power supply via M12 sockets and drives them via an M23 collective output. Consistent, easy, and safe connection of master cables and connectors without tools. Versions with internal locking also enable compact housing designs. With the cross-manufacturer locking system, plugging is. Galvanic isolation is used in starter generators, battery-management systems, onboard chargers and traction inverters to separate high-voltage circuits from low-voltage circuits. Isolation is necessary in these applications for electrical safety, as well as for the protection of sensitive circuitry. The new M12 distributor boxes with push-pull fast-locking from Phoenix Contact feature consistent, tool-free and intuitive installation.
