

Outgoing wires from the main distribution box

Overview

Wiring Direction: Wiring between the main circuit breaker and each branch circuit breaker in the box generally goes on the left, and the wiring out of the distribution box generally goes on the right. **Binding Requirements:** The wires should be bound with. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. Single Phase Distribution Box generally consists of Double Pole MCBs, Single Pole MCBs, and RCCBs. **Wire color:** The neutral wire is blue, and the color of the phase wire (A phase is yellow, B phase is green, and C phase is red). Distribution Board also known as “Panel Board”, “Switch & Fuse Board” or “Consumer Unit” is a box installed in the building containing on protective devices, such as circuit breaker, fuses, isolator, switches, RCDs and MCBs etc.
