

PDU power supply rack type

AI Overview

Rack PDUs distribute electrical power to multiple devices in a server rack, offering options from basic power strips to intelligent, remotely managed units for data center efficiency.

Overview of Rack PDUs A rack PDU (Power Distribution Unit) is a device designed to distribute electrical power from a single source to multiple IT devices within a server rack or network cabinet. Unlike standard power strips, rack PDUs are built for industrial-grade reliability, proper outlet spacing, surge protection, and often include monitoring and remote management features, making them essential for data centers, server rooms, and high-density IT environments.

Types of Rack PDUs

- Basic PDUs:** Provide simple power distribution without monitoring or remote control. Ideal for small setups or low-cost deployments.
- Metered PDUs:** Include local or remote metering to monitor current draw and power usage, helping prevent overloads and optimize load balancing.
- Monitored PDUs:** Offer remote monitoring of amperage, voltage, and environmental conditions like temperature and humidity, often via SNMP or web interfaces.
- Switched/Managed PDUs:** Allow remote control of individual outlets, enabling power cycling, group reboots, and enhanced operational control. These are ideal for high-availability or distributed IT environments.
- Intelligent PDUs:** Combine monitoring, outlet-level switching, and integration with DCIM platforms for real-time visibility, automated alerts, and capacity planning.

Key Features to Consider

- Outlet Types and Quantity:** Common outlets include NEMA 5-15, 5-20, IEC C13, and C19. Some PDUs offer combo or universal inputs for flexibility.
- Phase Type:** Single-phase PDUs suit smaller racks, while three-phase PDUs provide higher capacity and efficiency for dense data centers.
- Power Capacity:** Ensure the PDU can handle the total load of your rack equipment, considering future expansion.
- Remote Management:** Switched and intelligent PDUs allow remote monitoring and control, reducing the need for on-site intervention.
- Redundancy:** Dual-corded A/B p...
