Cameras and other devices can be constantly supplied with 48. All Ansice IP cameras adopt the standard 48V to 12V POE, and both 1236 and 4578 POE power supply modes are supported. The standard 48V POE power supply is powered by 1236, which not only transmits data, but also supplies power. Two power supply solutions for POE-The POE standard defines two methods for transmitting DC power to POE-compatible devices using Ethernet transmission cables: One is called "Mid-Span", which uses idle pairs that are not used in the Ethernet cable to transmit DC power (that is, 1236 line sequence. There are two common standards for standard PoE switches, IEEE 802. 3at, both of which support two power supply methods. Data runs over 1236 and power supply runs over 4578 In current market, the PoE cameras support both of these two. lients and other high power Ethernet end terminals. Both standard poe switches support two power modes: 11236 takes both data and power; 21236 to go data, 4578 power supply; ã€€Second, what kind of power supply is actually used?
