

Price of 24-core optical fiber cable arranged in sequence

AI Overview

A 24-core fiber optic cable typically costs between \$1.20 and \$3.50 per meter, depending on fiber type, construction, and application. Price Range Single-mode 24-core cable: \$1.50 to \$3.50 per meter, generally used for long-distance communication due to low signal attenuation. Multimode 24-core cable: \$1.20 to \$3.00 per meter, suitable for shorter distances such as within buildings or campuses. Factors Affecting Cost Fiber Type: Single-mode fibers are more expensive than multimode fibers because of higher manufacturing precision and superior performance. Cable Construction: Tight-buffered cables: Common for indoor use, lighter and less expensive. Loose-tube cables: Ideal for outdoor or underground installations, offering protection against moisture and temperature changes. Armored cables: Include a metal layer for mechanical protection, increasing cost, especially for high-risk areas. Installation Environment: Indoor riser-rated cables cost less than plenum-rated cables for air-handling spaces. Direct burial or underground installations are more expensive than aerial or indoor runs. Material Quality: Glass fiber cores are standard for high-speed, reliable transmission and cost more than plastic optical fibers. Practical Considerations Wholesale vs Retail: Bulk purchases can reduce per-foot or per-meter costs, with wholesale prices ranging from \$0.09 to \$1.52 per foot, while retail prices range from \$1 to \$6 per foot depending on fiber count and specifications. Additional Costs: Pre-terminated assemblies, patch cables, connectors, and labor for installation can increase the total project cost significantly. In summary, when budgeting for a 24-core fiber optic cable, expect \$1.20–\$3.50 per meter for the cable itself, with the final cost influenced by fiber type, construction, and installation requirements. For large-scale projects, considering total installation...
