

Price of fixing mesh cable trays to the wall

AI Overview

Fixing mesh cable trays to a wall typically costs between \$15 and \$50 per bracket, with total installation costs depending on labor, tray size, and mounting complexity.

Wall Bracket Costs Wall brackets for wire mesh cable trays are designed to provide secure, durable mounting. Standard 100mm wire mesh basket brackets are available for commercial and industrial use, often priced around \$15-\$30 per bracket for single units, with bulk or trade pricing available for larger projects. Brackets are usually made from galvanized steel or corrosion-resistant finishes, ensuring long-term stability and compliance with standards like EN 61537.

Installation Considerations The total cost of fixing cable trays includes both the bracket price and labor. Labor costs vary depending on:

- Installation height:** Higher wall mounting requires scaffolding or lifts, increasing labor costs.
- Tray size and weight:** Larger or heavier trays need stronger supports and more installers.
- Wall type:** Concrete, brick, or drywall affects the type of screws or anchors required and installation time.
- Project complexity:** Curves, slopes, or multiple tray levels can increase installation time.

For a typical indoor installation, labor may add \$20-\$50 per bracket depending on local rates and complexity, meaning the total cost per fixed tray point can range from \$35 to \$80.

Cost-Saving Tips Use lightweight wire mesh trays instead of heavy ladder trays to reduce bracket and labor requirements. Purchase bulk brackets to lower unit costs. Plan tray routes to minimize bends and high-level installations, which reduces labor time.

Summary

- Bracket cost: \$15-\$30 each
- Labor cost: \$20-\$50 per bracket
- Total per fixing point: \$35-\$80

Factors affecting cost: tray size, wall type, installation height, and project complexity. By considering these factors, you can estimate the budget for fixing mesh cable trays to walls in commercial or industrial...
