

Technical drawing of a 3D printed part. The drawing includes a top view and a side view. The top view shows a square base with a diameter of 5.9 and a central hole with a diameter of 3.19 ± 0.2. The side view shows a rectangular base with a width of 5.9 and a central hole with a diameter of 3.19 ± 0.2. The 3D model shows a green rectangular block with a central hole and a tapered section on the right side.

The basic cost to Install a Lighting Control System is \$4,040 - \$4,901 per system in May 2026, but can vary significantly with site conditions and options. Use our free [HOMEWYSE CALCULATOR](#) to estimate fair costs for your SPECIFIC project. Neutral wire needed: Most smart switches require neutral wire (white) in box – many older homes lack this. Load compatibility: LED bulbs may need specific dimmers. 3-way complications: Smart 3-way setups often need special companion switches. 0-10V dimming is an analog low-voltage control method where a 0-10V DC signal adjusts LED driver output from 0% (off or minimum) to 100% (full brightness). It requires two extra low-voltage wires (violet/gray, 18 AWG Class 1) between the dimmer and each LED driver. It acts as a bridge between your physical lighting fixtures and the smart systems that manage them. Instead of relying solely on traditional wall switches, you can control your lights via remotes, mobile or web apps. The most advanced lighting control module available today. Includes planning, equipment and material acquisition, area preparation and protection, setup and cleanup.
