

Prices of steel cable trays in North Africa

AI Overview

Steel cable tray prices in North Africa vary widely depending on material, finish, and project specifications, with local production and imports influencing costs. Market Overview North Africa, including Egypt, Algeria, and Morocco, represents a mature and relatively consolidated market for steel cable trays, supported by ongoing energy, industrial, and urban development projects. The region benefits from established local manufacturing, which can reduce costs compared to fully imported products, though imported trays remain competitive due to quality and specialized finishes. Factors Affecting Prices Material Type: Steel trays are available in pre-galvanised, hot-dip galvanised, and stainless steel (304/316). Pre-galvanised trays are generally light-duty and less expensive, while hot-dip galvanised and stainless steel trays are more durable and corrosion-resistant, commanding higher prices. Tray Type: Ladder, perforated, and solid-bottom trays differ in manufacturing complexity. Ladder trays are common for heavy-duty installations, while perforated trays are often used for cable ventilation and lighter loads, affecting cost. Finish and Corrosion Resistance: Environments with high humidity or corrosive conditions require stainless steel or heavy-duty galvanised finishes, which increase unit prices. Local vs Imported: Locally manufactured trays are generally more cost-effective, but imported trays may offer specialized designs or higher-grade materials, influencing pricing. Project Scale and Supply Chain: Large infrastructure projects can benefit from bulk pricing, while smaller orders may face higher per-unit costs due to logistics and import duties. Price Range Estimates While exact retail prices fluctuate, typical steel cable tray costs in North Africa can be summarized as follows: Pre-galvanised steel trays: approximately \$15-\$30 per meter for standard ladder or perforated trays. Hot-dip galvanised steel trays: approximately \$25-\$50 per meter, depending on thickness and load capacity. Stainless steel trays (304/316): approximately \$50-\$120 per meter, especially for specialized finishes or larger quantities.
