

Regulations for Power Plant Relay Protection

Overview

European Standards for Relay Protection are an essential aspect of electrical power network transmission and distribution. These standards provide guidelines and regulations for the design, implementation, and operation of relay protection systems in Europe. The IEC standard for relay coordination provides clear guidelines and methodologies to ensure that protective relays work in harmony to isolate only the faulty section of the system while keeping the rest. This document establishes the minimum design guidelines and recommended design philosophy for the protection systems associated with bulk power facilities within PJM. The facilities to which these protective relay philosophy and design guidelines apply are generally comprised of all large (100 MW.
