

Slovenia Low-voltage distribution box dimensions

Overview

You can customize the cabinet's dimensions: width (400-1000mm), height (1600-2200mm), and depth (400-800mm). The cabinet uses high-quality electrolytic steel or galvanized steel with a thickness of 2. We manufacture MV switchgear for voltages from 1 to 24 kV in accordance with SIST EN 62271-200/2004, SIST EN 62271-1:2009 and IEC 60694. Cells are equipped with current and voltage transformers as well as fuses for voltage transformers. MV switchgear is usually available only in type-tested. Available are TTA (type-tested assembly) switchboards, manufactured according to an adopted type or system with no changes and PTTA (partially type-tested assembly) switchboards, which include partially type-tested parts, with the latter derived from standard parts and suitably tested. The enclosure is made of bent steel plates, featuring a compact structure, easy maintenance, and flexible circuit scheme combinations. Besides air circuit breakers and fuses for circuit protection, the Low voltage distribution panels from CUBIC are constructed on our Modular System, which is the perfect solution for effective power distribution up to 6300 A. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export. Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions. The XL-21 Power Distribution Box is used for power distribution, conversion, transmission, control, and on-site operations in low-voltage distribution systems. It is widely applied in power plants, substations, petroleum, chemical, metallurgy, machinery, and high-rise buildings.
