

Special tools for high-voltage distribution boxes

AI Overview

High-voltage distribution boxes require specialized tools for safe installation, cable preparation, jointing, and testing, including expert toolkits, stripping tools, and measurement devices.

Essential Tools and Toolkits

- 1. Nexans Expert Tool Kit** The Nexans Expert Tool Kit is designed for professionals working with medium- and high-voltage cables. It includes:
 - US02-7000 Semicon Shaver & Stripping Tool for removing bonded semi-con insulation without lubrication.
 - Alroc LHA/60, BRMRD1E, and LH2 tools for precise insulation removal and cable joint preparation.
 - PG4 HTA cable tools for cutting and removing outer sheaths.
 - US15 slitting tool for medium-duty insulation removal.
 - MRA meter for measuring cable diameters and stripping lengths.
 - Kevlar® scissors for cutting tough fibers safely.This kit ensures that all necessary tools for high-voltage cable preparation and jointing are available in one ergonomic set.
- 2. High-Voltage Test Leads and Clips** For testing and diagnostics, insulated test leads and alligator clips are essential. Sets like the WGGE WG-026 provide multiple colors and lengths, suitable for high-voltage measurement tasks.
- High-Voltage Power Distribution Units (HV PDUs)** HV PDUs are compact, robust units used in electric vehicles and industrial applications to distribute power safely between batteries, inverters, chargers, and other electrical consumers. Tools for working with HV PDUs include:
 - Press-fit technology tools for PCB-based power distribution units.
 - Connector installation tools for flexible and safe connections.
 - Diagnostic and control integration tools for monitoring and managing high-voltage circuits.
- Design and Reference Resources** For engineers designing high-voltage distribution boxes, TI provides block diagrams, reference designs, and product recommendations to guide safe and efficient system development. These resources help select appropriate component...
