

Standard Network Cabinet Specifications and Prices

AI Overview

Network cabinets typically follow a 19-inch rack standard, with prices ranging from \$100 for basic wall-mounted units to over \$3,000 for specialized or outdoor models.

Standard Specifications

Rack Size and Mounting: Most network cabinets adhere to the 19-inch rack-mount standard, compatible with switches, routers, patch panels, and servers. Cabinets are available in wall-mounted (6U-12U) and floor-standing (12U-52U) configurations.

Height, Width, and Depth: Standard heights range from 600mm to 800mm (23.6"-31.5") for smaller cabinets, up to 42-52RU for enterprise systems. Depths typically range from 36" to 54", allowing for full-size server and networking equipment.

Load Capacity: Cabinets are designed to support loads from 300 lbs for small wall-mounted units to up to 5,000 lbs for heavy-duty floor-standing models.

Construction and Materials: Cabinets are commonly made from tubular steel, aluminum, or sheet metal, with fully enclosed designs including front and rear doors, removable side panels, and roofs for security and airflow control.

Cable Management and Power: Integrated features include vertical cable management rails, cable trays, tie-wraps, Velcro straps, and PDU mounting provisions. Some cabinets support intelligent PDUs for monitoring power usage.

Cooling and Ventilation: Cabinets often include airflow management packages, fan mounts, and hot/cold aisle containment options to optimize cooling and prevent equipment overheating.

Security and Access: Locking mechanisms, optional glass doors, and IP-rated enclosures provide physical security and protection against dust and environmental hazards.

Special Features: Some cabinets are seismic-certified, soundproof, or climate-controlled, suitable for sensitive or outdoor environments.
