

Standard Price of Guest Room Electrical Distribution Box

AI Overview

Electrical distribution boxes for hotel guest rooms typically range from \$150 to \$800 per room depending on features, capacity, and automation integration. Overview of Guest Room Distribution Boxes Distribution boxes for guest rooms are designed to manage and control electrical power efficiently, often integrating with occupancy sensors, HVAC, lighting, and other room services. Modern systems, such as the alfanar Hotel Room DB, include a main breaker, contactor, and branch breakers, allowing customization of branch breaker ratings to meet project requirements while ensuring energy savings and safety compliance with IEC standards. Pricing Factors The cost of a distribution box depends on several factors:

- Number of circuits: More circuits increase the price. Typical guestroom boxes handle 4-18 circuits.
- Automation features: Integration with occupancy sensors, key card systems, or networked room control increases cost. For example, Philips Dynalite guestroom kits include motion sensors, relay controllers, and optional HVAC integration, providing turnkey solutions for energy management.
- Voltage and amperage ratings: Higher capacity or three-phase systems cost more.
- Material and durability: Indoor vs outdoor-rated enclosures, fire-resistant or weatherproof materials affect pricing.
- Customization: Special labeling, mounting configurations, or integration with building management systems can add to the cost.

Typical Price Ranges

- Basic residential-style distribution boxes: \$150-\$300 per room for standard single-phase units with minimal automation.
- Advanced hotel guestroom DBs: \$400-\$800 per room for fully integrated systems with occupancy sensing, energy-saving logic, and networked control.
- Turnkey guestroom control kits: Preconfigured kits with relay controllers, sensors, and optional interfaces can cost \$500-\$700 per room, dependi...
