

Telecom fiber optic router keeps restarting

Overview

A TP-Link router that keeps restarting is usually caused by a power supply issue, overheating, outdated firmware, or the Auto Reboot feature being enabled. Try a different power outlet first. A faulty outlet or unstable power supply is one of the most common causes of repeated. If your router keeps restarting, you're not alone. About 30% of home network users face this issue. Repeated reboots interrupt video streaming, drop every connected device from the network, and can knock smart home devices offline until they reconnect. There are various reasons why routers reboot themselves periodically. It can interrupt work meetings, online classes, gaming sessions. Even if you have the best router, you can still occasionally run into a hardware issue or software bug that causes it to restart randomly.
