

Telecommunication Fiber Optic Cable Pole Erection and Wire Pulling Procedure

Overview

This document discusses techniques for installing optical fiber cables through pulling or blowing. It covers topics like route planning, cable handling, tools required, cable storage, installation methods, and techniques to maximize cable length during pulling. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Fiber in a duct solutions have a major aesthetic. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. The method covers the steps from receiving the materials on the installation site and cable pulling as per the approved shop drawings. If we can reduce failures and increase the service life of optical cables by carrying out communication optical cable construction in a standardized manner, it is worth understanding and learning for us telecommunications construction workers.
