

The distribution box needs to be inspected

AI Overview

Inspecting a distribution box involves checking for safety, proper operation, and maintenance of all electrical components, connections, and protective devices.

Visual Inspection

- Cleanliness and Housekeeping:** Ensure the enclosure is free from dust, debris, and moisture. Check for rust, corrosion, or paint deterioration on panels and terminals.
- Panel Integrity:** Verify that doors, locks, and canopies are intact and secure. Ensure no exposed live parts are present.
- Labeling and Signage:** Confirm that breakers, circuits, and warning signs are correctly labeled and color-coded.
- Indicators and Lights:** Check that all indicator lamps, meters, and control switches are functioning properly.

Electrical Connections and Components

- Circuit Breakers:** Inspect for proper operation, correct sizing, and signs of overheating or damage.
- Connectors and Terminals:** Verify torque settings, check for loose or corroded terminals, and inspect cable glands and plugs for sealing integrity.
- Wiring:** Look for burnt, frayed, or damaged wires and ensure tidy routing inside ducting.
- Grounding and Neutral:** Test continuity and resistance of grounding systems and ensure neutral and grounding bus bars are properly connected.

Protective Devices

- Surge Protection:** Confirm that surge protection devices are functional.
- Fuses and GFCI:** Check fuse continuity and ratings, and verify GFCI protection where applicable.

Insulation Testing: Perform insulation resistance tests on conductors to detect degradation.

Functional Testing

- Voltage and Load Checks:** Measure voltage levels at various points and test breakers under load conditions.
- Monitoring Systems:** Ensure any alarms, meters, or digital monitoring devices are operational.
- Battery and Backup Systems:** Inspect battery integrity and any signs of faults if present.

Safety and Compliance

- Access and Mats:** Ensure clear access to the panel and provision of rubber mats for operator safety.
