

Upgraded version of optical splitter

AI Overview

Upgraded optical splitters offer enhanced signal quality, broader device compatibility, and support for multiple outputs with minimal loss. Digital Audio Optical Splitters Modern Toslink or SPDIF optical splitters allow a single digital audio source to connect to multiple receivers simultaneously. Upgraded versions, such as the ANDTOBO Digital Toslink Splitter, are active splitters that require external power via USB-C and provide high-fidelity sound with minimal signal loss (less than 0.2 dB/m) over distances up to 40 meters, supporting devices like PS4, Xbox, TVs, soundbars, and wireless headphones. These splitters often feature precision-polished connectors and durable construction for reliable performance. Popular upgraded models include: J-Tech Digital Premium Quality Splitter: 1 input to 3 outputs, supports 5.1 channels, DTS, Dolby Digital, and PCM stereo, with over-voltage protection and lifetime technical support. ZEXMTE Digital Optical Fiber Splitter: 1 in, 2 out, 24K gold-plated interface, dust-protected, passive operation without extra power, compatible with multiple devices. LINKFOR Digital Optical Audio Splitter: 1 in, 3 out, supports 5.1 Dolby, cable loss
