

What to do if the KVM switcher changes the window position

Overview

This can be done through hotkeys on Windows (Windows Key + M) and restore all windows after switching back (Windows Key + Shift + M) - Windows 11 added a new feature in display settings in attempt to help with this issue as it applies to all native DisplayPort KVMs. A configuration change to Windows that will allow me to disable automatic. I switch between two computers using a level1techs KVM. When switching away from my Linux machine and then back to it, the position of any open windows are rearranged. My Windows 11 machine doesn't experience this problem. I assume it has something to do with how the desktop is handled when no. Why do my windows resize/rearrange when I switch computers?

The Display Data Channel (DDC) communication from each connected computer can be disrupted when the focus of a KVM switch is switched between computers. This causes the computer to revert to a basic display configuration. In which any. Whenever I switch to another KVM port, the primary workstation acts like the primary VGA monitor has been removed (labeled as monitor 1), and turns the HDMI monitor (labeled as monitor 2) into the primary monitor.
