

Which is better Category 6 panels or fiber optic cables

Overview

Cat6, the most widely used Ethernet cable category, is cost-effective and reliable. So, it is inevitable that some people will compare the two to determine which is more advantageous in cabling. Fiber cables, the best performance cable, are gaining popularity. This article will provide a detailed. When it comes to choosing the best cabling solution for networks, two options are most often chosen: category 6 twisted pair cables (CAT 6) and fiber optics. Both transmission media have their particularities, benefits and limitations that make them more suitable for different types of applications. If you are comparing fiber vs Ethernet cable, the short answer is simple: fiber is the right choice for long runs, high-speed uplinks, inter-building links, and electrically noisy environments.
