Overview

High-precision 6-phase testers (e., ZX-7000, UHV-1200) dominate the premium segment (\$5k-22k), offering 0.1% accuracy for critical transmission applications. Protection relay test sets, or relay testers, verify relays and microcomputer protections by simulating complex transient, permanent, and conversion faults. They can accurately simulate various fault currents and voltages, ensuring that the test results are highly reliable. For example, in the measurement of short-circuit currents, the error. The DDG Primary Current Injector Test Set is a high-current test device used to generate controlled large currents for safety testing, CT calibration, temperature-rise and. Key features - Enter tripping characteristics via primary X and t values - Add characteristics of additional relays and see. We have wholesale testing equipment for different equipment testing needs.
